FIXED MONTHLY COST!

For more information just contact our water treatment division

Water use for industry is one of the most important commodities necessary, whether it be softened water for boiler feed applications or deionised water for the electronics and pharmaceutical sectors or simply as a treated water to allow specific materials and food products to be manufactured, without water, most companies would not exist.

What can Access Utilities provide?

Access Utilities Ltd has a new approach to maintaining your water treatment equipment; we specifically tailor maintenance to your productivity needs, working with you to ensure that your water treatment system provides a reliable production of treated water between the agreed service schedules.

We offer a free of charge no obligation site survey to discuss your needs and then provide you with our report and fixed price service schedule to maintain your water treatment system. We also design, install and commission new water treatment systems for all types of treatment needs.
